

**School of Architecture****Case Study Report**

**Place of Visit:** Tarabai Park, CBS Bus Stand, Khasbag Kolhapur and Police Ground Bavada.

**Date of Visit:** 13<sup>th</sup> September 2020

**Subject:** Environmental Design I

**Topic:** Acoustical survey and landscape architecture at Kolhapur

**Description of Activities:**

Following are the points studied during the visit :

The visit was carried out for fourth year students for studying the different sound waves at different places according to public, private, semi-public areas.

The places we visited were Ruikar colony, CBS bus stand and khasbag. Here they studied different levels of sound waves in those areas with the help of sound trackers; also we have studied about landscape architecture for which we visited in police garden.

The students were divided into different groups to study the different types of areas like, public areas will be covered by one group private by another so these made it easy to cover all these areas.

Figure 2– CBS Bus stand, Kolhapur.

### Outcome:

After visiting the sites, students get acquainted with how public, semi public and private zones have different sound waves and also landscape for these zones makes a difference to design and place into according to the requirement.
